

II. GROUP ELECTION

In order to be fully compliant with the Restriction Requirement, Applicants elect the invention of Group I, claims 1-2, 6, 12-13, 15-16, and 18-19, drawn to a DNA molecule encoding a fragment of the wild type TAF_{II} 105 polypeptide of SEQ ID NO:2 or a fragment of the wild type polynucleotide of SEQ ID NO:1, an expression vector comprising said DNA molecule, and an antisense of SEQ ID NO:1. This election is made with traverse.

III. SPECIES ELECTION

In addition, Applicants elect the species of "inflammation". This species is readable on claim 19.

REMARKS

The Restriction Requirement further alleges that the wild-type TAF_{II} 105 polypeptide is known in the art (e.g., Dikstein et al, 1996, Cell 87:137-146, and U.S. Patent 5,710,025) and thus the technical feature of Group I does not make a contribution over the prior art. However, Applicants respectfully submit that the subject matter of Group I is not directed to a polypeptide but is rather directed to polynucleotides. Polynucleotides encoding TAF_{II} 105 are not taught or suggested by either reference. The Examiner is respectfully reminded that even if the above-cited references teach a TAF_{II} 105 polypeptide, a claim to a nucleic acid should not be considered obvious over a prior art disclosure of the corresponding protein or of a method of obtaining the nucleic acid. *In re Bell*, 991 F.2d 781 (Fed. Cir. 1993) and *In re Deuel*, 51 F.3d 1552 (Fed. Cir. 1995).
